

THE
HORSE'S VOICE
SADDLING

THV Saddling System

Based on the  System

A horse's back should lift and widen during movement. If a saddle 'fits' when the horse stands still, it will be too tight during movement. If it is wide enough to accommodate natural healthy movement, it will look too wide when the horse is stood still. It should look like this:

In movement, the horse's back should lift, expand and widen. The saddle needs to allow for this expansion.

Positioned well behind the shoulder blade, the saddle will tip down if you press on the pommel (but should not actually touch the wither)

The THV Saddling System then cushions, stabilises and balances the saddle. Here are some possible combinations (the Wool Fleece blanket is used underneath the Pro Complete Pads). Pads can be layered and / or positioned to best suit your horse's needs every time you ride.

There are more advanced ways to work with the pads if needed, so contact your THV registered Consultant / Advisor.

Pro Complete Base Pad 1/4' or 1/2' with 1/4' JB already in it

Pro Complete Base Pad and JB Pad 1/4' or 1/2'

Pro Complete Base Pad and RemB Pad 1/4' or 1/2'

Pro Complete Large JB Pad 1/4'

Pro Complete Large JB 1/4' and JB 1/4' or 1/2'

Pro Complete JB Pad 1/4' or 1/2'

When padded appropriately, the saddle will be stable, it will not rock or wobble and the deepest point will be in the center of the seat.

If appropriate, Pro Complete Pads can replace lost muscles while it recovers. Ask your THV Consultant / Advisor about therapeutic riding for recovering horses.

The Pro Complete material is designed to provide cushioning and support through every stride. The horse can compress or expand it using his own muscles.

Used correctly, the THV Saddling System promotes optimum posture, muscling, performance, attitude and wellbeing. Ask your THV Consultant / Advisor to help you make the most of this amazing system.
